

## SCOUR BOS®

Scour Bos® 9 delivers powerful protection against the bacterial and viral pathogens that lead to calf scours with the convenience and flexibility to administer at preg-check or dry-off.

**BROAD SPECTRUM** — Scour Bos contains more antigens than any other scours vaccine, including four *E. coli* isolates, 3-way rotavirus, coronavirus and *Clostridium perfringens* Type C.

**CONVENIENT** — Scour Bos can be administered up to 16 weeks precalving, providing the longest vaccination window of any scours vaccine.\*

**EFFECTIVE** — Vaccinating with Scour Bos allows for more time to build up quality, antibody rich colostrum that fosters calf protection against scours-causing pathogens.

Vaccinating with Scour Bos helps calves reach maximum lifetime value and contribute more profitably to an operation.

### VACCINATION GUIDELINES & LABEL DIRECTIONS

ADJUVANT: Xtend® III.

**DIRECTIONS:** Shake well before using. Administer 2 mL intramuscularly in the neck 8–16 weeks prior to calving. Revaccinate with Scour Bos® 4, 4 weeks prior to calving. Revaccinate with one dose of Scour Bos® 9, 8–10 weeks prior to each subsequent calving.

**PRECAUTIONS:** Store out of direct sunlight at 2°–7°C (35°–45°F).

**DO NOT FREEZE.** Use entire contents when first opened. Do not vaccinate within 60 days prior to slaughter. It is essential that newborn calves receive colostrum from the vaccinated dam.

**WARNING:** THIS PRODUCT MAY CAUSE PERSISTENT SWELLING AT THE SITE OF INJECTION. Anaphylactic reactions may occur. Symptomatic treatment: Epinephrine. Contains amphotericin B, gentamicin and thimerosal as preservatives.

The label contains complete use information, including cautions and warnings. Always read, understand and follow the label and use directions.
