MAKE THE
FUTURE
JAVA

ORACLE®

Why?

- LAPACK
 - Linear Algebra PACKage

L	A	P	A	C	K
L	-A	P	-A	C	-K
L	A	P	A	-C	-K
L	-A	P	-A	-C	K
L	A	-P	-A	C	K
L	-A	-P	A	C	-K

Why?

- LAPACK

- Linear Algebra PACKage
- written in Fortran 90
- highly optimized
 - “The original goal of the LAPACK was to ... run efficiently on shared-memory vector and parallel processors.”

L	A	P	A	C	K
L	-A	P	-A	C	-K
L	A	P	A	-C	-K
L	-A	P	-A	-C	K
L	A	-P	-A	C	K
L	-A	-P	A	C	-K

How?

- LAPACK

1. invoke library code
2. pass data into library
3. access data from Java

L	A	P	A	C	K
L	-A	P	-A	C	-K
L	A	P	A	-C	-K
L	-A	P	-A	-C	K
L	A	-P	-A	C	K
L	-A	-P	A	C	-K

Overview

- Existing
 - Java Native Interface (JNI) & JNR library
 - *java.nio.DirectByteBuffer*
 - sun.misc.Unsafe (get*/set*)
- JDK9
 - j.l.i.VarHandle views over ByteBuffers
- Future
 - Project Panama

Native Code

Native Code

- LAPACK

1. **invoke library code**
2. pass data into library
3. access data from Java

L	A	P	A	C	K
L	-A	P	-A	C	-K
L	A	P	A	-C	-K
L	-A	P	-A	-C	K
L	A	-P	-A	C	K
L	-A	-P	A	C	-K

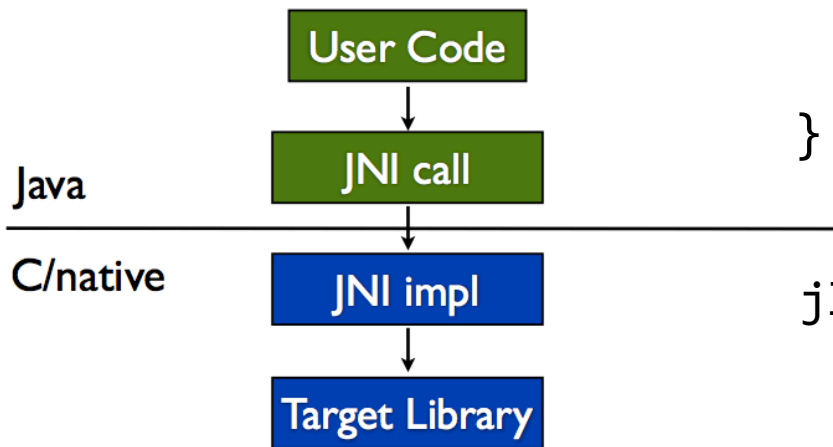

$$B = A^2$$

JNI

@since 1.1

JNI

Usage scenario

```
class LibC {  
    static native long getpid();  
}  
  
jlong JNICALL Java_LibC_getpid(  
    JNIEnv* env, jclass c) {  
    return getpid();  
}
```

JNI

Upcall

```
jlong JNICALL Java_...(JNIEnv* env,  
                        jclass cls,  
                        jobject obj) {
```

```
    jmethodID mid = env->GetMethodID(cls, "m", "(I)J");
```

```
    jlong result = env->CallLongMethod(obj, mid, 10);
```

JNI

Data access

```
jlong JNICALL Java_...(JNIEnv* env,  
                        jclass cls,  
                        jobject obj) {
```

```
jfieldID fid = env->GetFieldID(cls, "f", "J");
```

```
jlong result = env->GetLongField(obj, fid);
```

```
jlong result = env->SetLongField(obj, fid, 10);
```

JNI

Native API: JNIEnv

- Operations on
 - Classes
 - Strings
 - Arrays
 - Monitors

Java Frame

Native Frame

Java Frame

Native Frame

Java Frame

Native Frame

Anatomy of JNI call

Anatomy of JNI call

Safepoints

JNI

- Pros
 - seamless integration
 - looks like a Java method
 - rich native API to interact with Java
- Cons
 - manual binding
 - invocation overhead

JNI

Victim of its own success?

JNI

Sum array elements

```
jint JNICALL Java_...(JNIEnv *env, jclass c, jobject arr) {  
    jint len = (*env)->GetArrayLength(env, arr);  
    jbyte* a = (*env)->GetPrimitiveArrayCritical(env, arr, 0);  
    ...  
    return sum;  
}
```

	empty	sum 1	sum 10 ³	sum 10 ⁶
JNI	11.4±0.3 ns	178.0±7.1 ns	798±32 ns	641±51 μs

Critical JNI

/ @since 7 */*

Critical JNI

Sum array elements

```
jint JNICALL JavaCritical_...(jint length, jbyte* first) {  
    ...  
    return sum;  
}
```

	empty	sum 1	sum 10 ³	sum 10 ⁶
JNI	11.4±0.3 ns	178.0±7.1 ns	798±32 ns	641±51 μs
CriticalJNI	11.4±0.3 ns	17.2±0.8 ns	680±22 ns	636±12 μs

Critical JNI

Limitations

- only static, non-synchronized methods supported

Critical JNI

Limitations

- only static, non-synchronized methods supported
- no JNIEnv*
 - hence, no upcalls or access to Java heap

Critical JNI

Limitations

- only static, non-synchronized methods supported
- no JNIEnv*
- arguments: primitives or primitive arrays
 - [l => (length, l*)
 - null => (0, NULL)

Critical JNI

Limitations

- only static, non-synchronized methods supported
- no JNIEnv*
- arguments: primitives or primitive arrays
 - [l => (length, l*)
 - null => (0, NULL)
- no object arguments

Critical JNI

Limitations

- only static, non-synchronized methods supported
- no JNIEnv*
- arguments: primitives or primitive arrays
 - [l => (length, l*)
 - null => (0, NULL)
- no object arguments
- used only in optimized code
 - 2 versions are needed: ordinary JNI & critical JNI versions

Hard cases

```
int printf(const char *format, ...)
```

Hard cases

```
void qsort(  
    void* base,  
    size_t nel,  
    size_t width,  
    int (*cmp)(const void*, const void*));
```

JNR

Java Native Runtime

JNR

Usage scenario

```
public interface LibC {  
    @pid_t long getpid();  
}
```

```
LibC lib = LibraryLoader  
    .create(LibC.class)  
    .load("c");
```

```
libc.getpid()
```

DEMO

- native call
 - getpid
- structs
 - gettimeofday
- upcalls
 - qsort

JNR

- Pros
 - automatic binding of native methods
- Cons
 - manual interface extraction
 - doesn't scale
 - still uses JNI to perform native calls

Better JNI

Easier, safer, faster!

“If non-Java programmers find some library useful and easy to access, it should be similarly accessible to Java programmers.”

**John Rose, JVM Architect,
Oracle Corporation**

Project Panama

“Bridging the gap”

Better JNI

```
pid_t get_pid();
```

Easier

Better JNI

```
public interface LibC {  
    long getpid();  
}  
  
LibC libc = Library  
    .load(LibC.class, "c");  
  
libc.getpid();
```

Easier

Better JNI

```
public interface LibC {  
    long getpid();  
}
```

```
LibC libc = Library.load(LibC.class, "c" /* lib_name */ );
```

```
libc.getpid();
```

Faster

Better JNI

```
callq 0x1057b2eb0 ; getpid entry
```

Faster

Better JNI

```
MethodType mt = MethodType.methodType(int.class); // pid_t
MethodHandle mh =
    MethodHandles.lookup().findNative("getpid", mt);

int pid = (int)mh.invokeExact();
```

	getpid
JNI	13.7 ± 0.5 ns
Direct call	3.4 ± 0.2 ns

Safer

Better JNI

- no crashes
- no leaks
- no hangs
- no privilege escalation
- no unguarded casts

Safety vs Speed

Safety vs Speed

Privileged

Usage

Better JNI

gettimeofday

Better JNI

```
/* time.h */
```

```
struct {  
    time_t      tv_sec;  
    suseconds_t tv_usec;  
} timeval;
```

```
struct {  
    int tz_minuteswest;  
    int tz_dsttime;  
} timezone;
```

```
int gettimeofday(struct timeval* tv, struct timezone* tz);
```

Carrier Types

\$ jextract time.h

Better JNI

```
interface Time {
```

```
interface Timeval {  
    long tv_sec$get();  
    void tv_sec$set(long);  
    long tv_usec$get();  
    void tv_usec$set(long);  
}
```

```
interface Timezone {  
    int tz_...$get();  
    void tz_...$set(int);  
    int tz_...$get();  
    void tz_...$set(int);  
}
```

```
int gettimeofday(Timeval, Timezone);
```

Foreign Layouts

- Native data requires special address arithmetic
 - Native layouts **should not** be built into the JVM
 - Native types are unsafe, so trusted code must manage the bits
- **Solution:** A metadata-driven Layout API
- As a bonus, layouts other than C and Java are naturally supported
 - Network protocols, specialized in-memory data stores, mapped files, etc.

Better JNI

Data Layout

```
interface Timeval {  
...  
    @Offset(offset=0L)  
    long tv_sec$get();  
...  
    @Offset(offset=64L)  
    long tv_usec$get();  
...  
}
```

- work on Layout Definition Language (LDL) is in progress
 - <https://github.com/J9Java/panama-docs/blob/master/StateOfTheLDL.html>
 - <http://cr.openjdk.java.net/~jrose/panama/minimal-ldl.html>

Runtime

Better JNI

```
Library lib = Library.create("c");

Time time      = lib.create(Time.class);
Timeval tval    = lib.create(Timeval.class);

int res = time.gettimeofday(tval, null);

if (res == 0) {
    long tv_sec  = tval.tv_sec$get();
    long tv_usec = tval.tv_usec$get();
} else { /* error handling */ }
```

Runtime

Better JNI

```
Library lib = Library.create("c");

Time time      = lib.create(Time.class);
Timeval tval   = lib.create(Timeval.class);

int res = time.gettimeofday(tval, null);

if (res == 0) {
    long tv_sec  = tval.tv_sec$get();
    long tv_usec = tval.tv_usec$get();
} else { /* error handling */ }
```

Runtime

Better JNI

```
Library lib = Library.create("c");

Time time      = lib.create(Time.class);
Timeval tval   = lib.create(Timeval.class);

int res = time.gettimeofday(tval, null);

if (res == 0) {
    long tv_sec  = tval.tv_sec$get();
    long tv_usec = tval.tv_usec$get();
} else { /* error handling */ }
```

Runtime

Better JNI

```
Library lib = Library.create("c");

Time time      = lib.create(Time.class);
Timeval tval    = lib.create(Timeval.class);

int res = time.gettimeofday(tval, null);

if (res == 0) {
    long tv_sec  = tval.tv_sec$get();
    long tv_usec = tval.tv_usec$get();
} else { /* error handling */ }
```

Resources

Explicit management

```
Timeval tval = null;
try {
    tval = lib.create(Timeval.class);

    int res = time.gettimeofday(tval, null);
    if (res == 0) {
        long tv_sec  = tval.tv_sec$get();
        long tv_usec = tval.tv_usec$get();
    } else { /* error handling */ }
} finally {
    if (tval != null) {
        lib.free(tval);
        tval = null;
    }
}
```

Resources

Try-with-resources

```
interface Timeval extends AutoCloseable { ... }
```

```
try (Timeval tval = lib.create(Timeval.class)) {  
    int res = time.gettimeofday(tval, null);  
    if (res == 0) {  
        long tv_sec  = tval.tv_sec$get();  
        long tv_usec = tval.tv_usec$get();  
    } else { /* error handling */ }  
}
```

Resources

Scoped memory

```
try (Scope scope = lib.createScope()) {  
    TimeVal tval = scope.create(TimeVal.class);  
    int res = time.gettimeofday(tval, null);  
    if (res == 0) {  
        long tv_sec  = tval.tv_sec$get();  
        long tv_usec = tval.tv_usec$get();  
    } else { /* error handling */ }  
}
```

Resources

Scoped memory

```
TimeVal tval = null;

try (Scope scope = lib.createScope()) {
    tval = scope.create(TimeVal.class);
    int res = time.gettimeofday(tval, null);
} // end of scope
```

Resources

Scoped memory

```
TimeVal tval = null;

try (Scope scope = lib.createScope()) {
    tval = scope.create(TimeVal.class);
    int res = time.gettimeofday(tval, null);
} // end of scope

// Access attempts out of scope
long tv_sec  = tval.tv_sec$get(); // liveness checks!
long tv_usec = tval.tv_usec$get(); // liveness checks!
```

“Civilizer”

Better JNI

```
interface Timeval {  
    void gettimeofday(Timeval, Timezone) throws ErrNo;  
}
```

“Civilizer”

Better JNI

```
interface Timeval {  
    void gettimeofday(Timeval, Timezone) throws ErrNo;  
}
```

```
try (Timeval tval = lib.create(Timeval.class)) {  
    time.gettimeofday(tval, null); // throws exception  
    long tv_sec  = tval.tv_sec$get();  
    long tv_usec = tval.tv_usec$get();  
}
```

Variadic Function

Better JNI

```
int printf(const char *format, ...)
```

jextract + Civilizer

Better JNI

```
// int printf(const char *format, ...)
```

```
interface Stdio {

}
```

Optimize checks

```
void run(MyClass obj) {  
    if (!performChecks()) jump failed_stub;  
    call transJavaToNative();  
    MyClass::nativeFunc1(env, obj);  
    MyClass::nativeFunc2(env, obj);  
    MyClass::nativeFunc3(env, obj);  
    call transNativeToJava();  
}
```

Better JNI

Easier, Safer, Faster!

- Native access between the JVM and native APIs
 - Native code via FFIs
 - Native data via safely-wrapped access functions
 - Tooling for header file API extraction and API metadata storage
- Wrapper interposition mechanisms, based on JVM interfaces
 - add (or delete) wrappers for specialized safety invariants
- Basic bindings for selected native APIs

Native Data

Native Data

- LAPACK

1. invoke library code
2. pass data into library
3. access data from Java

JNI

@since 1.1

NIO

@since 1.4

NIO

“New I/O”

- Provides access to the low-level I/O operations
 - Buffers for bulk memory operations
 - on-heap and off-heap
 - Character set encoders and decoders
 - Channels, a new primitive I/O abstraction
 - File interface
 - supports locks and memory mapping of files
 - Multiplexed, non-blocking I/O

java.nio.Buffer

- java.nio.ByteBuffer / CharBuffer / ...
 - MappedByteBuffer extends ByteBuffer
 - *memory-mapped region of a file*
 - DirectByteBuffer extends MappedByteBuffer
 - malloc'ed native memory
 - HeapByteBuffer
 - backed by byte[]

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);
while (dbb.hasRemaining()) {
    dbb.putInt(...); // init
}
LAPACK.square(dbb.address(), size); // invoke
dbb.rewind(); // reset position
while (dbb.hasRemaining()) {
    int i = dbb.getInt(); // read result
}
```

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);
while (dbb.hasRemaining()) {
    dbb.putInt(...); // init
}
LAPACK.square(dbb.address(), size); // invoke
dbb.rewind(); // reset position
while (dbb.hasRemaining()) {
    int i = dbb.getInt(); // read result
}
```

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);
while (dbb.hasRemaining()) {
    dbb.putInt(...); // init
}
LAPACK.square(dbb.address(), size); // invoke
dbb.rewind(); // reset position
while (dbb.hasRemaining()) {
    int i = dbb.getInt(); // read result
}
```

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);
while (dbb.hasRemaining()) {
    dbb.putInt(...); // init
}
LAPACK.square(dbb.address(), size); // invoke
dbb.rewind(); // reset position
while (dbb.hasRemaining()) {
    int i = dbb.getInt(); // read result
}
```

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);
while (dbb.hasRemaining()) {
    dbb.putInt(...); // init
}
LAPACK.square(dbb.address(), size); // invoke
dbb.rewind(); // reset position
while (dbb.hasRemaining()) {
    int i = dbb.getInt(); // read result
}
```

java.nio.DirectByteBuffer

Usage

```
ByteBuffer dbb = ByteBuffer.allocateDirect(size);  
while (dbb.hasRemaining()) {  
    dbb.putInt(...); // init  
}  
LAPACK.square(dbb); // invoke  
while (dbb.hasRemaining()) {  
    int i = dbb.getInt(); // read result  
}
```

java.nio.Buffer

Summary

Make most of the JDK's internal APIs inaccessible by default but leave a few critical, widely-used internal APIs accessible, until supported replacements exist for all or most of their functionality.

sun.misc.Unsafe

Use case	Example methods
Concurrency primitives	<code>compareAndSwap*</code>
Serialization	<code>allocateInstance</code> (<code>ReflectionFactory.newConstructorForSerialization</code>)
Efficient memory management, layout, and access	<code>allocateMemory/freeMemory</code> <code>get*/put*</code>
Interoperate across the JVM boundary	<code>get*/put*</code>

sun.misc.Unsafe

Use case	Replacement
Concurrency primitives	JEP 193 Variable Handles
Serialization	Reboot JEP 187 Serialization Improvements
Efficient memory management, layout, and access	Project Panama, Project Valhalla, Arrays 2.0, Better GC
Interoperate across the JVM boundary	Project Panama, JEP 191 Foreign Function Interface

`java.lang.invoke.` **VarHandle**

```
VarHandle byteBufferViewVarHandle(Class<?> viewArrayClass,  
                                   boolean bigEndian) {...}
```

*“Produces a **VarHandle** giving access to elements of a **ByteBuffer** **viewed** as if it were an **array of elements** of a different primitive component type to that of byte, such as `int[]` or `long[]`.”*

VarHandle

ByteBuffer View

```
VarHandle VH =  
    MethodHandles.byteBufferViewVarHandle(  
        int[].class,  
        ByteOrder.nativeOrder() == ByteOrder.BIG_ENDIAN);  
  
ByteBuffer dbb = ByteBuffer.allocateDirect(size);  
  
int v = (int)VH.get(dbb, idx);
```

java.nio.ByteBuffer vs VarHandle View

	DirectByteBuffer	VarHandle
Size	< 2 GiB	< 2 GiB
State	Yes	No
Resource management	GC-based	No (delegates to DBB)
Zeroing	Yes	No (delegates to DBB)
Atomics/Fences/...	No	Yes
Bound checks	Yes (optimized)	Yes (optimized)

Optimized Bounds Checks

`int[]`

```
// null check + (index u< array.length)
return array[index];
```

Optimized Bounds Checks

int[]: Unsafe access

```
// bounds and null check
if (index < 0 || index >= array.length)
    throw new ...();

long offset = BASE + (((long) index) << 2);
return UNSAFE.getInt(array, offset);
```

Optimized Bounds Checks

`int[]`: Unsafe access

```
// bounds (u<) and null check  
index = Objects.checkIndex(index, array.length);
```

```
long offset = BASE + (((long) index) << 2);  
return UNSAFE.getInt(array, offset);
```

```
@HotSpotIntrinsicCandidate  
public static int checkIndex(int index, int length, ...);
```

Summary

- Existing
 - Java Native Interface (JNI) & JNR library
 - *java.nio.DirectByteBuffer*
 - `sun.misc.Unsafe` (get*/set*)
- JDK9
 - `j.l.i.VarHandle` views over ByteBuffers
- Future
